Data Flow Diagram (EduGenie – AI Learning Assistant):

Create a Data Flow Diagram (DFD) to illustrate how user requests move through the EduGenie AI Learning Assistant. The diagram shows the flow of data between the student (user), the AI processing modules, and the data storage, resulting in features such as question answering, concept explanation, text summarization, quiz generation, and learning recommendations. The DFD helps visualize how information is processed and returned to the user.

Symbol	Name	Description
Oval / Rounded shape	Student/User (External Entity)	Represents the student or learner who interacts with the EduGenie system by asking questions, requesting explanations, quizzes, summaries, or learning recommendations.
Rectangle with numbered header	Process	Represents a processing step such as User Request Processing, AI Processing (Gemini), Quiz Generation, Concept Explanation, or Learning Recommendation.
Rectangle (solid fill, no number)	Data Store	Stores user information, learning history, quiz results, and generated learning content used by the system.
Labeled arrow	Data Flow	Shows the movement of data between the user, AI processes, modules, and the database (e.g., Question, Answer, Quiz, Summary, Learning Path).

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
